DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23 and 30-55, drawn to an induction sensor comprising a multilayered printed circuit comprising a current transformer and operating coil, classified in class 324, subclass 207.17.
 - II. Claim 24-26 and 56-58, drawn to a method for taking into account the dependence of induction sensors signal on the distance between induction sensors and a tested document that includes a microcontroller programmed to calculate a correction coefficient, classified in class 324, subclass 207.12.
 - III. Claims 27-29, drawn to a banknote validator comprising a banknote evaluation channel, a transport arrangement for moving a banknote through the channel and means for sensing changes in magnetic properties of a banknote classified in class 194, subclass 213.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has the parts that make up an induction sensor for testing conductive security structures, while

Art Unit: 2862

invention II has a microcontroller that calculates a correction coefficient of a signal from a electronic processing circuit and invention III has an evaluation channel and a transport arrangement. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group 1 is not required for Groups 2 and 3, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2862
